

[METHOD OF TRANSMITTING VOICE DATA]

Abstract of Disclosure

A method for transmitting audio data between a computer and a GPRS card. The computer is connected to the GPRS card through corresponding connectors. The method includes after the computer receives an audio signal, transforming the audio signal into a digital signal, and packeting the digital signal into a plurality of audio units, then transmitting the plurality of audio units to the GPRS card through the connectors. Finally, the plurality of audio units are transformed to become the original digital signal, and the digital signal is transformed to become the original audio signal.
